Popis pracoviště

Identifikace látky / směsi a společnosti/podniku	
Název produktu:	Imbox 121213-7
Dodavatel:	Imbox Shoecare A/S Gåseagervej 10 8250 Egaa Denmark
Prvky označení:	
Vysoko hořlavá kapalina a páry. (H225) Při požití a vniknutí do dýchacích cest může způsobit smrt. (H304) Dráždí kůži. (H315) Může způsobit ospalost nebo závratě. (H336) Vysoko toxický pro vodní organismy, s dlouhodobými účinky. (H410) Produkt se používá v uzavřeném systému pro impregnaci obuvi. Uživatel nesmí přijít do přímého styku s obsahem produktu. Při každé impregnaci se použije přibližně 3–9 ml produktu. Vzduch z impregnacní komory je filtrován přes filtr s aktivním uhlíkem. Očekávaná míra vystavení: Minimální. Produkt s dokončenou impregnací je považován za artikl. Na výrobek se nevtahuje povinnost označování podle nařízení CLP (č. 1272/2008). Byl stanoven výpočet míry vystavení používanému produktu. RCR (Risk Characterization Ratio = poměr charakterizace rizik) je nižší než 1, riziko je tedy kontrolované. Scénář vystavení ukazuje, že při manipulaci s impregnovanou obuví nejsou požadovány osobní ochranné pomůcky.	Impregnační přípravek - pouze pro použití v uzavřeném systému. Specifikace produktu; viz SDS pro profesionály. PC15 Produkty pro povrchovou úpravu nekovů. PC23 Produkty pro činění, barvení, konečnou úpravu, impregnaci a ošetřování kůží. PC34 Produkty pro barvení, apretaci a impregnaci textilií.
 Pokyny pro první pomoc:	
Vdechování:	V případě nepohodlí po vdechnutí: Přemístěte postiženou osobu na čerstvý vzduch. V případě trvajících obtíží vyhledejte lékařskou pomoc.
Požití:	Ústa důkladně vypláchněte vodou a malými doušky vypijte 1–2 sklenice vody. Nevyvolávejte zvracení. V případě trvajících obtíží vyhledejte lékařskou pomoc.
Styku s kůží:	V případě trvajících obtíží vyhledejte lékařskou pomoc a Kůži ihned omýjte vodou a mydlem.
Styku s okem:	Oči promývajte vodou (přednostně pomocí zařízení pro výplach očí) dokud podráždění neustoupí. Pokud příznaky přetravávají, vyhledejte lékařskou pomoc.
Popáleniny:	-
Nouzové telefonní číslo:	1-1-2

Pokyny pro první pomoc

Ochrana rukou:	Není požadováno.
Ochrana očí a obličeje:	Není požadováno.
Ochrana kůže:	Není požadováno.
Ochrana dýchacích cest:	Není požadováno.

Opatření pro hašení požáru

Vhodná hasiva:	K hašení použijte suchý prášek, pěnu, oxid uhličitý nebo vodní mlhu. Nepoužívejte proud vody, kterým se může požár rozšířit.

Analysis Report No. 416552 Rev.1
This report replaces Analysis Report No. 416552

Assignment: Measurement of VOC emission from shoe impregnation machine

Sampling by: DTI Laboratory for Chemistry and Microbiology

Sample(s) received: 13 January 2011

Test performed: 14 - 24 January 2011

Test results: The results of the analysis and the method(s) used concern only the sample(s) analysed or the sub-sample(s) selected for analysis.

This analysis was carried out in accordance with Danish Technological Institute's General Terms and Conditions regarding Commissioned Work Accepted by Danish Technological Institute. This analysis report may be quoted in extract only if the Laboratory for Chemistry and Microbiology has approved the extract in writing.

The Laboratory for Chemistry and Microbiology

Paul Lyck Hansen
Senior Consultant

Tested product

Imbox version 1.0

Assignment

Characterisation of impregnation liquid and functional testing of Imbox impregnation machine.

Analysis method

The characterisation of the impregnation liquid was carried out by gas chromatographic analysis by GC/MS. The identification of the found components took place by comparison with the NIST MS library. Regarding chromatograms, please see the enclosures.

The functional testing of the impregnation machine was carried out with a MiniRAE 3000 VOC analyser. The equipment was adjusted and calibrated for measurement of n-heptane.

Results

Composition of the impregnation liquid

The head space analysis showed that the applied solvent mainly consists of isomer heptanes corresponding to the solvent naphtha 80/110.

A dichloromethane solution of the impregnation liquid with subsequent GC/MS analysis showed that the impregnation liquid mainly consists of siloxanes.

Functional testing

Measurements were carried out in the impregnation chamber and at the discharge of the charcoal filter, respectively. The measurement in the impregnation chamber showed a max. VOC air concentration 1200 ppm declining to 150 ppm after the impregnation cycle ended.

At the charcoal filter discharge, a VOC content of app. 5 ppm was measured during the impregnation cycle.

Conclusion

The instructions from the Danish Working Environment Authority "Limit values for Substances and Materials – C.0.1" dated August 2007 defines limit values for n-Heptane of 200 ppm and solvent naphtha 80/110 of 400 ppm.

The measurements that were carried out are below both limit values.

Therefore, the design of the shoe impregnation machine is assessed to be appropriate from a working environment hygienic point of view.

Comments

A revision was made of Analysis Report No. 416552 as the company name and address have changed.

Enclosures appear from the previously forwarded report.

In the original report, the date stated under "Test performed" was incorrect. The date has been corrected to "14 – 24 January 2011" in this revised report.

Orderer: Imbox ShoeCare A/S
Gaseargervej 10 DK - 8250 Ega / Denmark
Order: Examination of materials
Your letter/Fax/Email dated 2015-03-15 Received: 2015-02-26
Test item: Imbox-Shoecare, Imprægneringsvaeske 121213-7, Batchno. 4381

Test results:

Description of procedure on the following pages.

Parameter	Unit	Result *	Material	Rating
Alkylphenole Ethoxylates, OPEO+NPEO	mg/kg	< 100 NPEO < 100 OPEO	EP	0
Formaldehyde	mg/kg	< 10	EP	0
Perfluorooctane sulphonate, PFOS	mg/kg	< 0.1	EP	0
Perfluorooctanoic acid, PFOA	mg/kg	< 0.1	EP	0

Rating:

0 = Sample meets the requirements

0a = Sample meets the requirements, result below the quantification limit

1 = Further test necessary

2 = Sample failed the requirements

- = not tested or material not available

Remarks:

n.n = not detectable (n.d.), MP = mixed materials, EP = single material test

* Explicit given results for mixed materials (MP) are the total content of the sample. For values with sign of inequality the content of each material of the mixed sample is below the given value

The product meets the actual legal requirements in the tested parameters.

Examination Procedure:

Test methods are part of the laboratory accreditation (D-PL-14150-01-00)

Shortened form: Alkyphenolethoxylates, OPEO+NPEO

Determination of Nonylphenol ethoxylates (NPEO) and Octylphenol ethoxylates (OPEO)

Alkyphenoles: using GC-MS after solvent extraction with methanol

Alkyphenol ethoxylates: after draft standard DIN EN ISO 18218-1:2012-09 for leather, after draft standard DIN EN ISO 18254:2014-06 for textiles

Shortened form: Formaldehyde

Determination of free and hydrolytic Formaldehyde

DIN EN ISO 14184-1:2011-12 and BVL B 82.02-1:1985-06

Test methods are not part of the laboratory accreditation (D-PL-14150-01-00)

Shortened form: Perfluorooctane sulphonate, PFOS

Determination of Perfluorooctane sulphonate

Draft standard DIN SPEC 1038; DIN CEN/TS 15968:2010-11

Shortened form: Perfluorooctanoic acid, PFOA

Determination of Perfluorooctane acid

according to draft standard DIN SPEC 1038; DIN CEN/TS 15968:2010-11

Expertise: **1501780-01-00-01/04**

Datum / Date: 2015-03-03
LV/

Assessment:

The tested shoe care product showed a good anti-soiling behavior against dry dust and pigments. During testing almost no adhesion of the test soil could be determine on the surface of the specimen.

The water repellency of the product can be assessed as excellent and the results meet almost the maximum possible rating number. In comparison to the untreated reference leather fibre board the characteristics of the behavior against water drops and simulated rain were highly improved.

Statement of Conformity

This product does not fall under the "ATEX" Directive 94/9/EC and as such cannot be affixed with the special marking for explosive protection and other marking details specified in Annex II, EHSR 1.0 of the Directive.

Nevertheless under operation conditions a potentially explosive atmosphere may be created and the enclosed area with belonging components are assessed with regard to explosion risk.

Statement Number **TÜV DK 1201024-01**

for the equipment: Impregnation machine for shoes
Brand Name: "Imbox"

of the manufacturer: **Imbox ShoeCare A/S**

Address: Haraldsgade 17B
7400 Herning
Denmark

Order number: 51200030

Date of issue: 2012-02-22

This equipment or protective system and any acceptable variation thereto are specified in the belonging assessment report no: 1101024-0.

The parts of the product in which under operation conditions a potentially atmosphere is created has been assessed with regard to:

EN 60079-15:2005 EN 60079-0:2009

If the sign "X" is placed after the statement number, it indicates that the equipment or protective system is subject to special conditions for safe use specified in the report to this statement.

This "Statement of Conformity" relates only to the design, examination and tests of the specified equipment in accordance to the assessment report 1101024-01. Further requirements may apply to the manufacturing process and supply of this equipment. These are not covered by this statement.

2 RF- Field, Emission.

The purpose is to document the level of field emission generated by the EUT.

The limit relates to the protection of radio and TV receivers and other sensitive equipment.

Test set-up and method:

DS/EN 61000-6-3 with set-up and method as defined in the basic standard DS/EN 55022.

DS/EN 61000-6-4 with set-up and method as defined in the basic standard DS/EN 55011.

Detector: Quasi-peak with a measuring bandwidth of 120 kHz

Limits:

		DS/EN 61000-6-3 Basic standard: EN 55022 Class B	DS/EN 61000-6-4 Basic standard: EN 55011	
Frequency range [MHz]:		Measuring distance = 10 m <i>See note 1, 2 and 5</i>	Measuring distance = 10 m <i>See note 4 and 5</i>	Measuring distance = 30 m <i>See note 3</i>
Final measurements	30 - 230	30 dB μ V/m @ 10 m	40 dB μ V/m @ 10 m	30 dB μ V/m @ 30 m
	230 - 1000	37 dB μ V/m @ 10 m	47 dB μ V/m @ 10 m	37 dB μ V/m @ 30 m
Guidance measurements	30 - 230	40 dB μ V/m at 3 m	50 dB μ V/m at 3 m	
	230 - 1000	47 dB μ V/m at 3 m	57 dB μ V/m at 3 m	

Note 1: *From the basic standard:*

"Applicable only for apparatus containing processing devices e.g. microprocessors, operating at frequencies greater than 9 kHz"

Note 2: *From the basic standard (Remark): "The statistical evaluation in the basic standard applies"*

Note 3: *From the basic standard: "In-situ measurements are excluded from this standard"*

Note 4: *From the basic standard (Remark): "Emission may be measured at 10 m distance using the limits increased by 10 dB if the provisions of CISPR 11 are used"*

Note 5: *If a guiding measurement of emission are performed in a shielded room with a distance between EUT and the antenna of 3 m the limits values are limits increased by 10 dB. One should be very carefully because, even by increasing the limits, the results may vary significantly from the final results performed at the calibrated outdoor test set-up (Open Area Test Site). Typically a higher level of noise will be measured in the shielded room. But most interesting is to note emission at specific frequencies for further analyzing.*

Detector:

The Quasi-peak detector makes a weighted measurement and the measurement method is used in both of the basic RF-emission standards (EN 55011 and EN 55022) for final measurement results.

In practice, to save time, the measurements will be started by using a peak-detector. This measurement is a non-weighted "worst-case" measurement.

If the measurements made with peak-detector give a result with values close to or above the specified limit, then final measurements will be carried out by use of the Quasi-peak detector.

Result.

The test was performed in a G-TEM Cell, and the data from X,Y, and Z axis are correlated.
The test specification is DS/EN 61000-6-3.

Specified limits were not exceeded during the test.

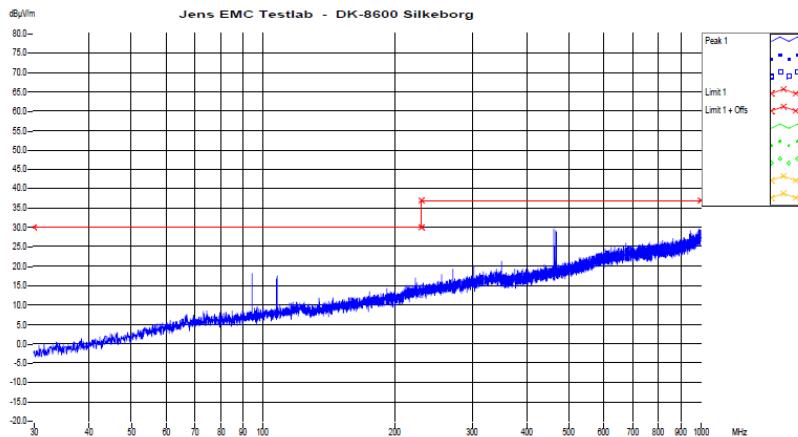

The EUT complied with the requirements in the specified standard.
